

LangChain

Chain = PromptTemplate | LLM | StrOutputParser

LCEL: LangChain Expression Language.

→ chain.invoke(—)

User asks	<u>LLM alone can answer?</u>	Tool needed?
"Explain what a refund policy means."	Yes	No
"Check my order status for ORD-1001."	No	Yes
"Create a refund ticket for my damaged item."	No	Yes
"Compare live stock prices."	No	Yes
"Search my database and summarize matching records."	No	Yes

Tool.

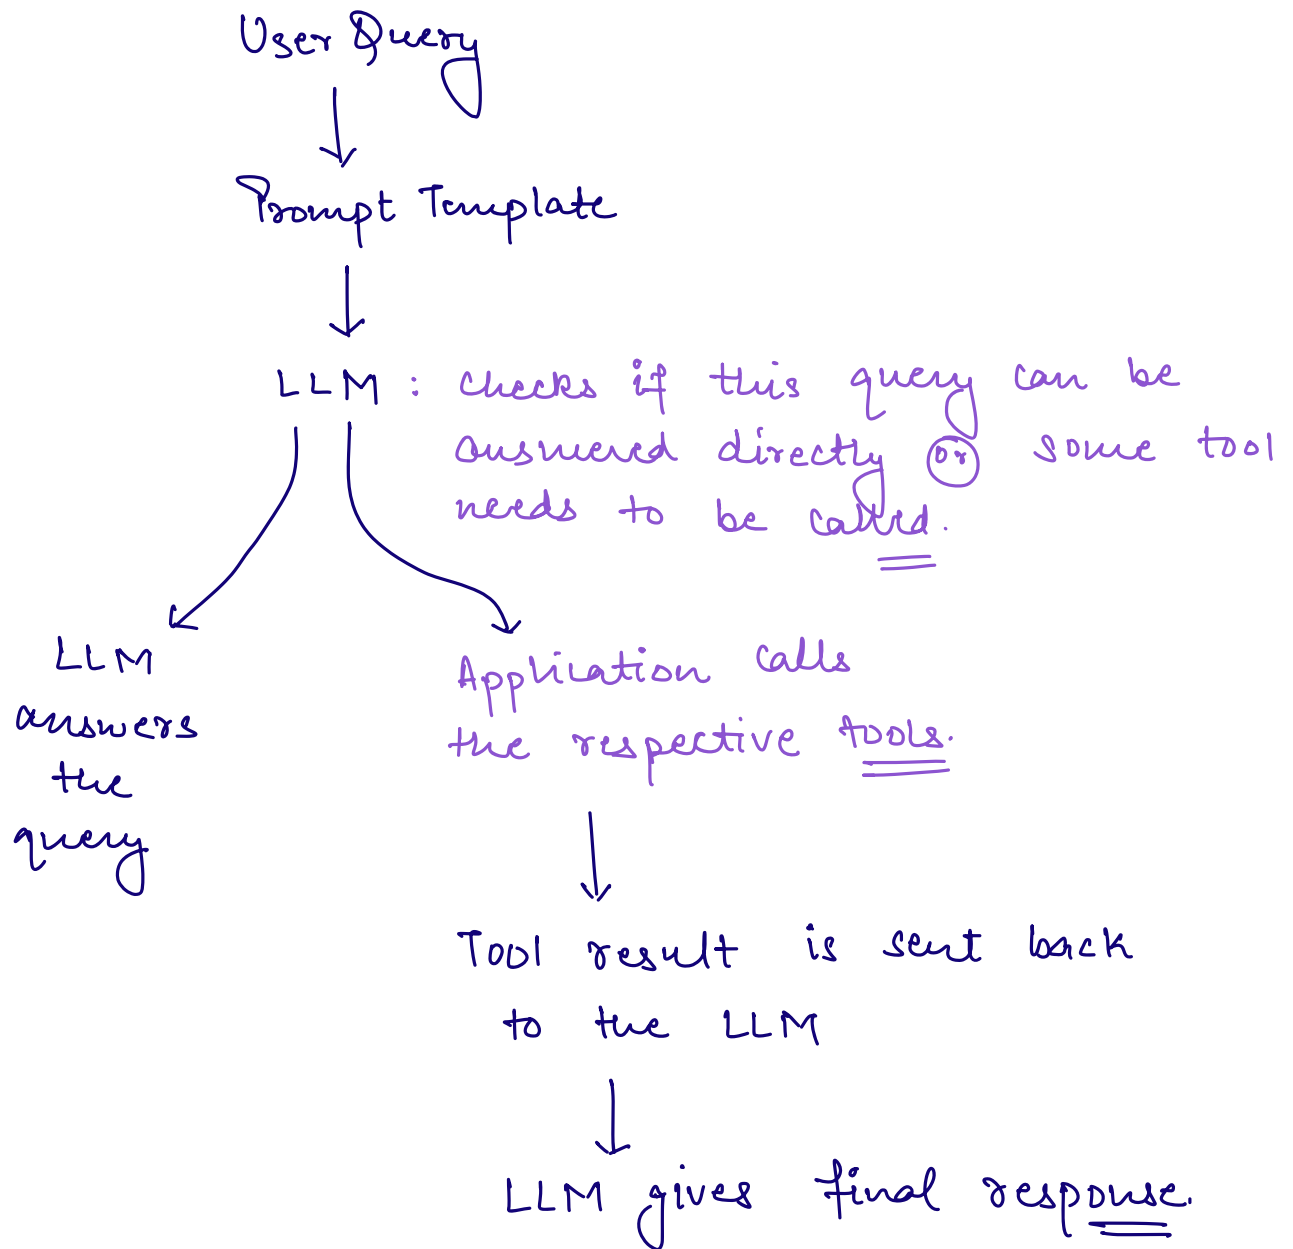

→ In langchain, tool is just a callable function.

@tool

```
def get_order_status (order_id):
```

```
    """  
    """
```

```
    """  
    """  
    """
```

Tool $\equiv$ Function + Name + Description +
Input / Output schema.
