

→ Rule-Based Approach

if (number of refunds > 10) {

reject the request;

}
else {

3

⇒ logic is clear & we want to take some action based on certain condition.

→ Traditional ML Approach.

→ learns from historical patterns data.

→ Give lot of examples / patterns to the machine & ask them recognize a new pattern based on the existing ones.

⇒ human-in-the-loop.

Examples

→ Spam Detection

→ Fraud Detecting

→ translation

→ Classification.

GenAI.

⇒ It can generate text, images, audio, docs, ...
using some pre-trained model.

Examples.

- Code (Claude)
- ChatBot
- Summarization
- Teacher
- Resume feedback
